**PATIENT NAME:** ASMAD, TANIA  
**DATE OF BIRTH:** 01/09/1974  
**MRN #:** JM22634  
**DATE OF SERVICE:** 06/18/2022 12:42:21 PM  
**REFERRING PHYSICIAN:** JOHN J. MCGEE, DO

**EXAM:** MRI OF THE THORACIC SPINE

**INDICATION:** 48-year-old female with a history of trauma with back pain.

**TECHNIQUE:** MRI of the thoracic spine was performed using multiplanar and multisequence imaging.

**COMPARISON:** None.

**FINDINGS:** The vertebral bodies outline normally. There is no abnormal marrow signal. There is no evidence of disc bulge or herniation. The thoracic spinal cord demonstrates normal course, caliber, and signal intensity. The conus medullaris is unremarkable. The visualized paravertebral soft tissues are grossly unremarkable. There is a subcentimeter lesion noted in the dome of the liver. There is a partially visualized probable right renal cyst measuring at least 1.4 cm.

**IMPRESSION:**

1. No evidence of disc herniation.
2. Subcentimeter lesion in the dome of the liver. Partially visualized probable right renal cyst measuring at least 1.4 cm. Ultrasound can be performed for a more complete evaluation of these findings.

Thank you for the opportunity to participate in the care of this patient.
