PATIENT NAME: ALVAREZ, ERICK
DATE OF BIRTH: 10/01/1984
MRN #: JM22352
DATE OF SERVICE: 05/02/2022 05:13:22 PM
REFERRING PHYSICIAN: JOHN J. MCGEE, DO

MRI EXAM OF THE RIGHT HIP WITHOUT CONTRAST

INDICATION: S/P MVA. Right hip pain.

TECHNIQUE: MRI exam of the right hip was performed in sagittal, coronal and axial planes using T1 and T2-weighted sequences.

COMPARISON: . There are no prior exams for comparison.

FINDINGS: . The right hip is intact. There is no fracture or focal bony lesion. There is uniform signal intensity in T1 and T2-weighted sequences in the right femoral head and neck, the intertrochanteric portion of the right femur and the right acetabulum.

The right hip joint is maintained with smooth articular margins. There are no bony erosions. The labrum are intact. There is a joint effusion which appears physiologic.

There is increased signal intensity in T2-weighted sequences in the tissues in proximity to the greater trochanter consistent with trochanteric bursitis. No additional soft tissue abnormality is seen.

IMPRESSION:

1. No fracture or focal bony lesion.
2. Intact right hip joint.
3. Trochanteric bursitis.
4. No additional soft tissue abnormality.

Thank you for the opportunity to participate in the care of this patient.
