PATIENT NAME: ASMAD, TANIA
DATE OF BIRTH: 01/09/1974
MRN #: JM22634
DATE OF SERVICE: 06/18/2022 12:27:59 PM
REFERRING PHYSICIAN: JOHN J. MCGEE, DO

EXAM: MRI OF THE CERVICAL SPINE

INDICATION: 48-year-old female with a history of trauma with neck pain.

TECHNIQUE: MRI of the cervical spine was performed using multiplanar and multisequence imaging.

COMPARISON: None.

FINDINGS: The vertebral bodies outline normally. The marrow signal does not demonstrate any evidence of infiltrative or destructive marrow process. The cervical spinal cord demonstrates a normal course, caliber, and signal intensity. The visualized paravertebral soft tissues are grossly unremarkable.

C2-C3, C3-C4, C4-C5 and C7-T1: There is no evidence of disc herniation. The neural foramina are patent. The facet joints are within normal limits.

C5-C6: There is disc bulging exerting pressure on the thecal sac. The neural foramina are patent. The facet joints are within normal limits.

C6-C7: There is disc bulging exerting mild pressure on the thecal sac. The neural foramina are patent. The facet joints are within normal limits.

IMPRESSION:

1. Disc bulging exerting pressure on the thecal sac at C5-C6 and to a lesser extent C6-C7.

Thank you for the opportunity to participate in the care of this patient.
